

Public Complaint Resolver

Introduction

In our day-day life we are seeing and facing lots of social issues and we are not having a time to react on it or we feel hesitating to report that issues to the head of the department in personal

Existing System

In already existing system , there was a capable for rising complaint which is provided by district municipality . People can arise a query they can solve those problems through application (for example salem => smart salem) . They take care of those complaint and they solve it

Problem Statement

To rise and delivering complaints of various department and

Keep tacking actions taken to that social issues

What exactly needs for the normal society people ?

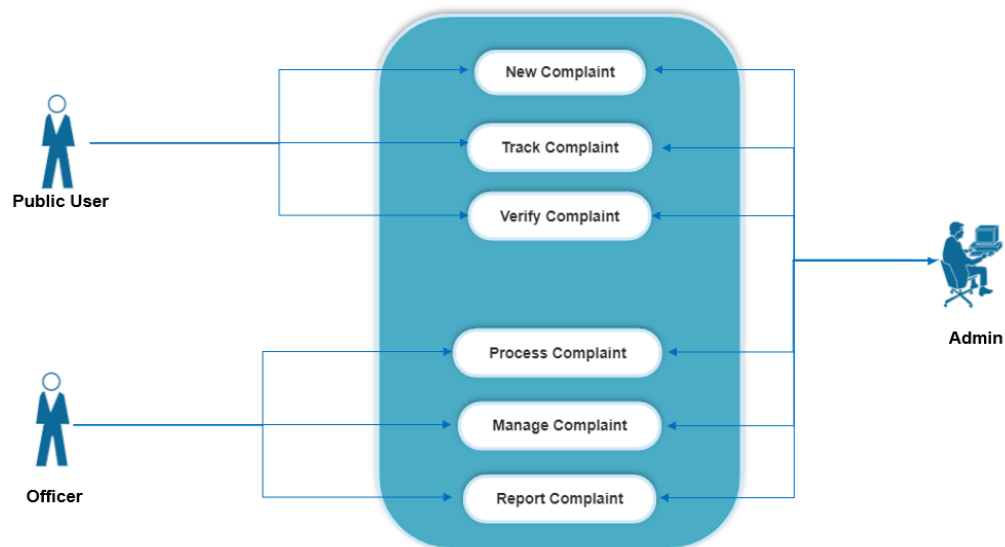

How we implement their needs ?

How we analyse the issues solved or not ?

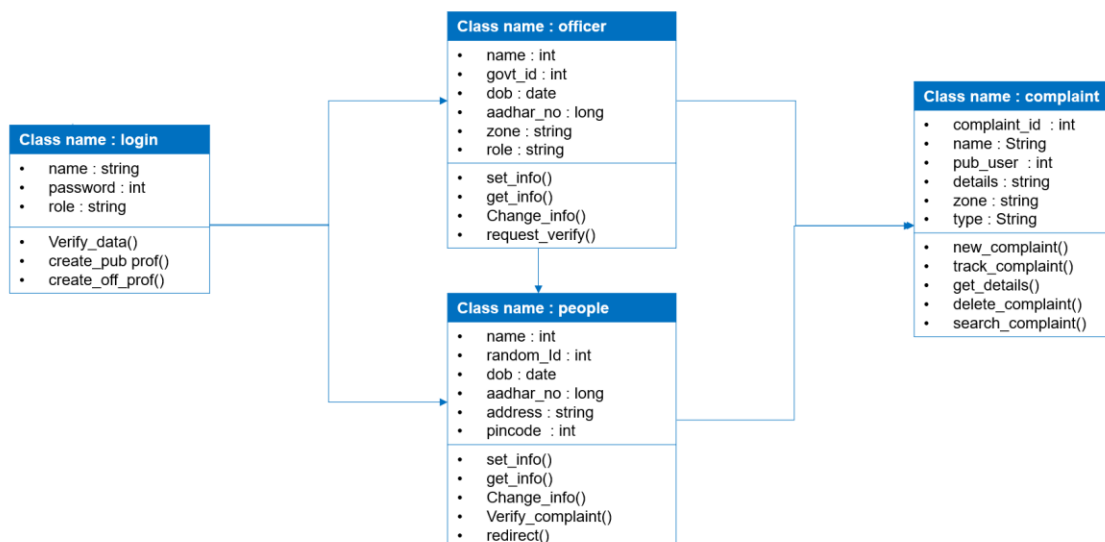

Innovation On My System

In our System there is a feature of public conformation access weather those problem is solved or not . This System provides a feature of anonymous public complaint rising .
